

WHAT WE HAVE LEARNED DURING THIS PROJECT

During the execution of this project we have reinforced the following skills:

- documenting a project, mainly, writing the docstrings and commenting on the code.
- implementing various functions of the random library.
- structuring a program into subfunctions in a more agile and better way.
- making the output as clean and visual as possible.
- Improving our internet search skills.

Problems that we've found through the process:

- Translating a problem statement into a coherent, functional and simple code.
- Manipulation of dictionaries and in obtaining keys and values.
- Use of local variables as if they were global variables caused problems in code execution.
